POWER BI | TASK

Customer Churn Analysis and Prediction

Analyze a telecom company's churn data and build a dashboard that reveals which customers are at risk.

Individual task brief

Project Overview

A telecommunications company is losing customers. Using Power BI, analyze its churn dataset and build a dashboard that identifies at-risk customers and leads to clear retention actions.

Note: complete all tasks.

Analyze

Explore churn patterns across the customer base

Identify

Spot the customers most at risk of leaving

Recommend

Turn insights into actions that improve retention

Task Roadmap

Task 1
Data Connection

Task 2
Data Transformation

Task 3a
Churn Rate Overview

Task 3b
Customer Demographics

Task 3c
Tenure Analysis

Task 3d
Churn Analysis

Build the data foundation first, then the dashboard views.

Build the Data Foundation

Task 1: Data Connection

Import the provided customer churn dataset into Power BI so it is ready for visualization.

Skills tested: importing data and connecting data sources in Power BI

Task 2: Data Transformation

Clean and transform the dataset for visualization. Handle missing values, incorrect data types, duplicates and inconsistent values.

Skills tested: data cleaning, transformation and preprocessing (Power Query)

Task 3: Dashboard Components

3a. Churn Rate Overview

Show the percentage of customers who have churned.

Skills: cards, KPIs, donut charts

3b. Customer Demographics

Visualize gender, partner and dependent status.

Skills: bar and pie charts

3c. Customer Tenure

Show the distribution of tenure (in months).

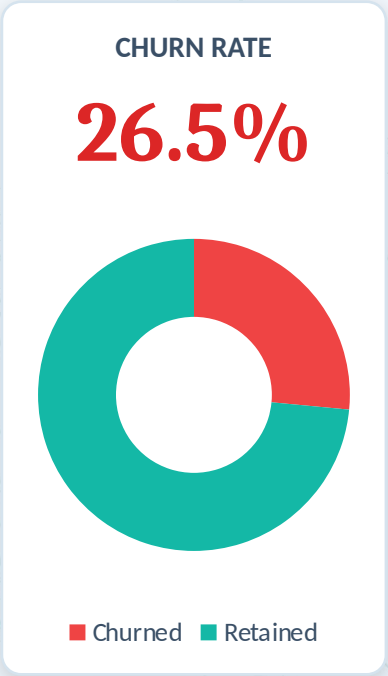

Skills: histograms, box plots

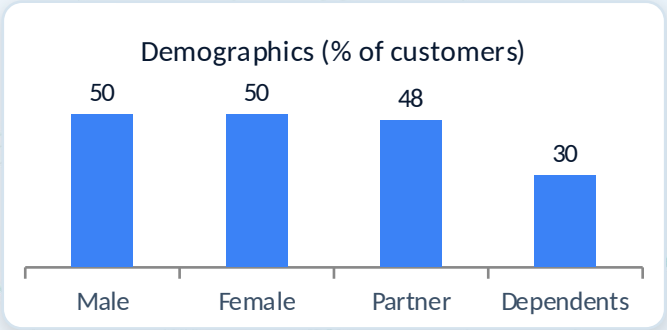

3d. Churn Analysis

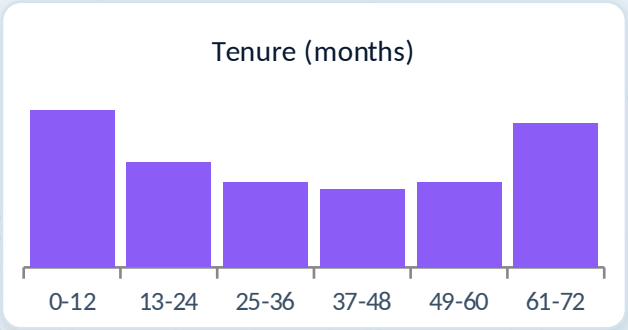

Analyze churn by contract type, payment method and internet service.

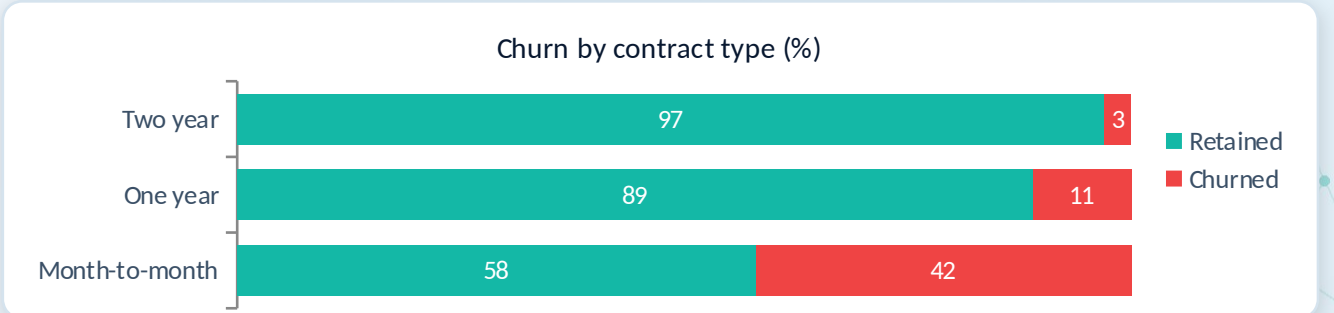

Skills: stacked bars, heatmaps

Dashboard Layout Preview

Illustrative layout with sample data. Your charts will use the real dataset.

Deliverables

Power BI files (.pbix)

One .pbix file for each task or level.

Written summary

A short summary of key findings and recommendations for reducing churn.

Complete all tasks, then turn your findings into retention recommendations.
